

## AT&T Grants Support STEM

AT&T is collaborating with the Consortium of Florida Education Foundations (CFEF) this school year to provide experiential learning opportunities through AT&T STEM at Work grants. The Foundation for SCPS received two \$2,000 grant awards. Lyman High School students will work on the “Collaborating Apps for a Better World” project. Students will learn about project management and the engineering design process for a STEM-based program. At Stenstrom Elementary School, 4<sup>th</sup> and 5<sup>th</sup> grade students will participate in the “Working from SCRATCH!” program to understand computer fundamentals, programming, and project design skills.

“We know that industries engaged in STEM disciplines will create a majority of high-value, high-wage jobs and within ten years, almost nine out of ten new jobs will require education beyond a high school degree,” said Joe York, AT&T Florida President. “We are pleased to make this contribution because Florida’s K-12 education foundations are well positioned to be the link between schools and local businesses for students, enabling them to build connections with potential employers in their communities, get a sense of what careers they offer and the skill sets they require.”
